

Website Report

Functional components:

- Header
- Footer
- I have used event handler and callback function components
- I have used useEffect(), fetchData(), function Home(), function Tools(), function Service(), function about().

WebHooks

- Home
- Service
- About Us
- Tools => React Web Hooks are used here

Research

- I have followed some of online tutorials, w3schools and stack overflow.

Media Query:

```
@media screen and (max-width: 500px){
  .list {
    flex-direction: row;
    height: auto;
  }
  /* .items:nth-child(1){
    border-top: 1px solid rgba(255, 255, 255, 0.555);
    margin-top: 0px;
  } */
  .items {
    width: 20%;
    /* border-top: 1px solid rgba(255, 255, 255, 0.555); */
    text-align: center;
    margin-right: 0px;
    padding: 3% 0;
    font-size: small;
  }
  .btn {
    display: block;
  }
  .head1{
    margin-top: 10%;
  }
  .img600{
    min-height: 300px;
    min-width: 300px;
  }
}
```

I have used media queries to resize the image when the size of screen gets small as well as the width of the some of the elements.

GESALT Principle:

I have used Symmetry as GESALT Principle.

In Service page, I have grouped the cards that are symmetrically equal that also allows to generate patterns based on that symmetry to easily structured the information.
